

Maternal Health Risk Assessment Report

Generated: 2026-09-06 07:29 — AIMHRA decision-support system

Risk category: HIGH RISK

Model confidence: 60.0%

Per-class probabilities: low risk: 0.0%, mid risk: 40.0%, high risk: 60.0%

Model: RandomForest rep-ran

Patient

Patient identifier: P-0FC1BB24

Assessment date: 2026-08-03

Assessment measurements

Measurement	Value
Age (years)	30.0
Body temperature (F)	98.4
Heart rate (bpm)	90.0
Systolic BP (mm Hg)	150.0
Diastolic BP (mm Hg)	96.0
BMI (kg/m2)	25.0
HbA1c column value	40.0
Fasting glucose column value	6.0

Risk trend

Stored assessment sequence: high risk

Direction vs previous: unknown (baseline)

The system does not predict future risk; trends describe stored assessments only.

Model explanation (SHAP)

- BMI (kg/m2) = 25.0 — increased the model's risk estimate (impact +0.220)
- Diastolic blood pressure (mm Hg) = 96.0 — increased the model's risk estimate (impact +0.167)
- Systolic blood pressure (mm Hg) = 150.0 — decreased the model's risk estimate (impact -0.088)
- Heart rate (bpm) = 90.0 — increased the model's risk estimate (impact +0.074)
- Blood glucose - fasting column (dataset units) = 6.0 — decreased the model's risk estimate (impact -0.052)
- Blood glucose - HbA1c column (dataset units) = 40.0 — decreased the model's risk estimate (impact -0.046)

These features contributed most to the model's prediction. They are statistical contributions, not medical causes.

Rule-based alerts

- [HIGH_CONCERN] Warning signs were detected that should be assessed by a healthcare professional promptly. Please contact your clinic or midwife today.

Disclaimer

This is an AI-generated risk estimate produced by a statistical model. It is not a medical diagnosis and does not replace professional medical assessment. If you feel unwell or notice warning signs, contact a healthcare professional.
