

Maternal Health Risk Assessment Report

Generated: 2026-09-06 12:24 — AIMHRA decision-support system

Risk category: MID RISK

Model confidence: 51.7%

Per-class probabilities: low risk: 39.1%, mid risk: 51.7%, high risk: 9.2%

Model: XGBoost v1.202609061144

Patient

Patient identifier: P-4336ED2A

Assessment date: 2026-09-06

Gestational week: 5

Assessment measurements

Measurement	Value
Age (years)	26.0
Body temperature (F)	98.0
Heart rate (bpm)	110.0
Systolic BP (mm Hg)	120.0
Diastolic BP (mm Hg)	70.0
BMI (kg/m2)	22.0
HbA1c column value	20.6
Fasting glucose column value	2.8

Risk trend

Stored assessment sequence: high risk -> high risk -> mid risk

Direction vs previous: decreasing (improving)

The system does not predict future risk; trends describe stored assessments only.

Model explanation (SHAP)

- Diastolic blood pressure (mm Hg) = 70.0 — decreased the model's risk estimate (impact -1.379)
- Heart rate (bpm) = 110.0 — increased the model's risk estimate (impact +1.321)
- Systolic blood pressure (mm Hg) = 120.0 — decreased the model's risk estimate (impact -0.953)
- Blood glucose - HbA1c column (dataset units) = 20.6 — increased the model's risk estimate (impact +0.493)
- Blood glucose - fasting column (dataset units) = 2.8 — decreased the model's risk estimate (impact -0.233)
- Body temperature (F) = 98.0 — increased the model's risk estimate (impact +0.200)

These features contributed most to the model's prediction. They are statistical contributions, not medical causes.

Rule-based alerts

No warning rules triggered for this assessment.

Disclaimer

This is an AI-generated risk estimate produced by a statistical model. It is not a medical diagnosis and does not replace professional medical assessment. If you feel unwell or notice warning signs, contact a healthcare professional.
